

Data sheet

Shut-off diaphragm valve

Types BML and BMT

BML are manual shut-off diaphragm valve designed for installation in the liquid, suction and hot gas lines of refrigeration plants. BML valves can be delivered with flare, ODF solder or ODF solder with extended ends.

In the same product category, BMT 6 is a three-way manual shut-off valve with similar characteristics.

Features

- Fitted with three stainless steel diaphragms that prevent leakage throughout the operating life of the valve.
- Valve plate of polyamide nylon to give complete shut-off with minimum torque.
- Valve cover with counter-seat to prevent the ingress of moisture.
- Solder versions are compliant with ATEX hazard zone 2.

Technical data

Refrigerants	R134a, R22/R407C, R404A/R507, R32, R290, R600, R600a, R1270, R513A, R450A, R1234ze, R1234yf. For complete list of approved refrigerants, go to http://products.danfoss.com/all-products/
Media Temperature range	-55 – 100 °C / -67 – 212 °F
Working range	$\Delta p = -1 - 21 \text{ bar} / -14 - 304 \text{ psig}$
Max. working pressure	PS/MWP = 28 bar / 406 psig
Max. test pressure	Pe = 46 bar / 667 psig

Note: Only solder versions are allowed for flammable refrigerant.
This product is approved for R290, R600, R600a and R1270 by ignition source assessment in accordance to standard EN13463-1.

The shut-off diaphragm valves are fitted with three diaphragms of stainless steel which ensure long operating life. BM valves are available in straightway, and three-way versions (BMT). The side connection of the three-way BMT can be shut off, but the end connections will always remain open. The BM can be fitted with a mounting bracket. Valve body, cover and spindle are made of brass, the handwheel (3) of coloured plastic. BM valves have a triple diaphragm seal (8) which is designed in such a way that the tension in the diaphragms lift the valve plate from the seat when the valve is opened.

The valve plate itself is made of nylon and gives complete shut-off when the handwheel is lightly tightened. The thrust pad (7) prevents direct contact between spindle (5) and diaphragms (8). This also contributes to increased valve life. The spring (9) is able to hold the valve open at operating pressures down to -1 bar (pe). The counter-seat in the cover (6) prevents the ingress of moisture in fully open position. When the valve is opened, the pressure on the outlet side must not exceed the pressure on the inlet side by more than 1 bar.
