

## Data sheet

# Motor operated valves and Actuators

## Type ICM and ICAD

ICM motor operated valves belong to the ICV family and are one of two product groups.

*ICV types*

- ICS - Pilot operated servo valve
- ICM - Motor operated valve

The motor operated valve comprises four main components: Valve body, top cover, function module and Actuator. On ICM 20 – 65 the top cover and function module will be combined. ICM are motor operated valves driven by actuator type ICAD.

ICM valves are designed to regulate an expansion process in liquid lines with or without phase change or control pressure or temperature in dry and wet suction lines and hot gas lines. ICM valves are designed so that the opening and closing forces are balanced, therefore, only two sizes of ICAD actuators are needed for the complete range of ICM from DN 20 to DN 150. The ICM motor operated valve and ICAD actuator assembly offers a very compact unit with small dimensions.

**Features (valve)**

- Low temperature direct-weld steel body.
- Low weight and compact design.
- V-port regulating cone ensures optimum regulating accuracy particularly at part load.
- Modular Concept
  - Each valve body is available with several different connection types and sizes.
  - Valve overhaul is performed by replacing the function module (ICM 20 – 65).
  - Possible to convert ICM motor operated valve to ICS pilot operated servo valve.
  - Spare parts available for ICM 100 – 150.
- Manual opening possible via ICAD or Multi-function tool.
- PTFE seat provides excellent valve tightness.
- Magnet coupling - real hermetic sealing.
- ICAD 600A / 1200A include encoder function that will provide a true valve position feedback to Danfoss controller or non-Danfoss control systems.
- Classification: DNV, CRN, BV, EAC etc.  
To get an updated list of certification on the products please contact your local Danfoss Sales Company.

## Introduction

The ICM motor operated valve and ICAD actuator combinations are as follows:

Actuator	ICAD 600A	ICAD 1200A
Valve size	ICM 20	ICM 40
	ICM 25	ICM 50
	ICM 32	ICM 65
		ICM 100
		ICM 125
		ICM 150

### ICAD 600A / ICAD 1200A

ICAD actuators can be controlled using the following signals:

- 0 – 20 mA
- 4 – 20 mA (default)
- 0 – 10 V
- 2 – 10 V
- Digital input for ON / OFF function
- Two digital inputs for floating 3-point control (open - neutral - close)

ICAD actuators can also operate an ICM valve as an ON / OFF function supported by a digital input.

The ICM valve can be operated manually via the ICAD actuator or the Multi-function tool for ICM (see the ordering section).

### Fail Safe supply options

In the event of a power failure, multiple fail safe options are possible, provided that a ICAD-UPS or similar is used.

During power failure, ICM can be selected to:

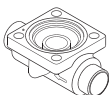

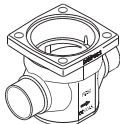

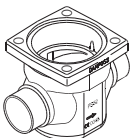

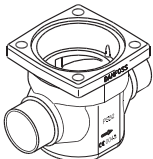

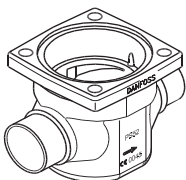

- Close ICM
  - Open ICM
  - Stay in the same position, as when power failure occurs
  - Go to a specific ICM valve opening degree
- See the section ICAD UPS for further information.

**Please note:** a fail safe supply (battery or UPS) is required.

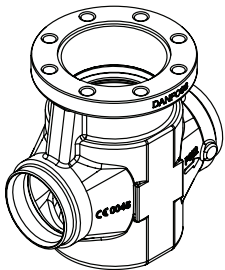

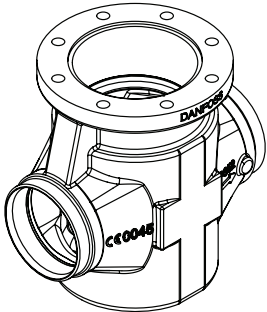

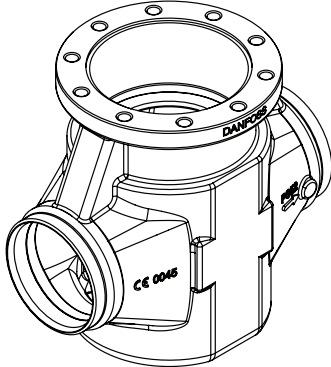

### The ICM Concept

The ICM concept is developed around a modular principle. This gives the possibility of combining function modules and top covers with special valve body size that is available in a variety of connection possibilities.

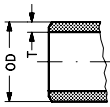

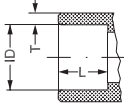

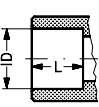

- There are nine valve bodies available.

					
ICV 20	ICV 25	ICV 32	ICV 40	ICV 50	ICV 65

		
ICV 100	ICV 125	ICV 150

- Valve bodies in the sizes ICV 20 – ICV65 are available with a range of undersizes through oversized connection sizes and types.  
ICV 100 – ICV 150 are available in butt-weld ANSI nominal sizes

A	SOC	ODS	FPT
			
Butt-weld ANSI	Socket weld ANSI	Solder ANSI	Female Pipe Thread

**The ICM Concept**  
(continued)

- Each body may be fitted with multiple function / top cover to give different capacities.

Type	Valve body size	K <sub>v</sub> (m <sup>3</sup> /h)	C <sub>v</sub> (USgal/min)
ICM 20A-33	20	0.2	0.23
ICM 20-A		0.6	0.7
ICM 20-B66		1.6	1.9
ICM 20-B		2.4	2.8
ICM 20-C		4.6	5.3
ICM 25-A	25	6	7.0
ICM 25-A33		2	2.3
ICM 25-B		12	13.9
ICM 32-A	32	9	10.4
ICM 32-B		17	20
ICM 40-A	40	15	17
ICM 40-B		26	30
ICM 50-A	50	23	27
ICM 50-B		40	46
ICM 65-A	65	35	41
ICM 65-B		70	81
ICM 100-B	100	142	167
ICM 125-B	125	223	260
ICM 150-B	150	370	430

A magnetic coupled actuator is easily installed.  
Only two actuators are needed to cover the entire ICM program

## Design (valve)

### Connections

There is a very wide range of connection types available with ICM valves:

- BW: Butt weld, ANSI (B 36.10)
- SOC: Socket weld, ANSI (B 16.11)
- ODS: Solder connection, ANSI (B 16.22)
- FPT: Female pipe thread (ANSI/ASME B 1.20.1)

### Approvals

The ICV valve concept is designed to fulfil global refrigeration requirements.

ICM is CE, UL and CRN approved

For specific approval information, please contact Danfoss.

The ICM valves are approved in accordance with the European standard specified in the Pressure Equipment Directive and are CE marked.  
For further details / restrictions - see Installation Instruction.

ICM valves			
Nominal bore	DN ≤ 25 (1 in.)	DN 32-65 (1 ¼ – 2 ½ in.)	DN 80-125 (3 – 5 in.)
Classified for	Fluid group I		
Category	Article 3, paragraph 3	II	III

## Technical data (valve)

- **Refrigerants**  
ICM 20, ICM 100, ICM 125 and ICM 150:  
Applicable to HCFC, non flammable HFC, R717 (Ammonia) and R744 (CO<sub>2</sub>)

ICM 25-65:

Applicable to HCFC, non flammable HFC, R717 (Ammonia), R744 (CO<sub>2</sub>) and R1234ze

Use with flammable hydrocarbons cannot be recommended. For further information please contact your local Danfoss sales company.

- **Temperature range:**  
Media: -60 – 120 °C / -76 – 248 °F.

When used in liquid refrigerant above 75 °C / 167 °F, please contact Danfoss

- **Pressure**  
The valve is designed for:  
Max. working pressure: 52 bar g / 754 psi g
- **Surface protection**  
ICM 20 – 150:  
The external surface is zinc-chromated to provide good corrosion protection.

- **Max. opening pressure differential (MOPD)**

– ICM 20 – 32:	52 bar / 750 psi
– ICM 40:	40 bar / 580 psi
– ICM 50:	30 bar / 435 psi
– ICM 65:	20 bar / 290 psi
– ICM 100	20 bar / 290 psi
– ICM 125	20 bar / 290 psi
– ICM 150	20 bar / 290 psi

- **Time to move from Closed to Open position or in reverse order with maximum selected speed at IC AD.**

ICM 20: 3 Sec.	ICM 65: 13 Sec.
ICM 25: 7 Sec.	ICM 100: 25 Sec.
ICM 32: 8 Sec.	ICM 125: 35 Sec.
ICM 40: 10 Sec.	ICM 150: 45 Sec.
ICM 50: 13 Sec.	

## Function (valve)

ICM motor operated valves are designed for use with the ICAD, Industrial Control Actuator with Display.

The driving force from the actuator is transferred via a magnetic coupling (a) through the stainless steel top housing (b) and thus eliminates the need for a packing gland. The rotational movement of the magnetic coupling (a) is transferred to a spindle (c) which in turn provides the vertical movement of the piston (d) and the valve seat (e), to open and close the valve. The closing force of the actuator, combined with the the valve seat (e) and PTFE valve plate (f), provides an effective seal to prevent leakage across the valve port, when the valve is in the closed position. To prevent damage to the PTFE valve seat (e) and plate (f) from system debris, it is recommended that a filter is installed upstream of the valve. Please refer to FIA filter / strainer literature for selection and ordering.

### ICM 20 – 65:

Valve inlet pressure ( $P_1$ ) acting on the underside of the PTFE valve seat (e) also passes through the hollow piston assembly (d) on to the top of the piston (d) and balances the pressure acting on the piston (d). Any trapped liquid across the throttle cone (g) is allowed to equalise down to the valve outlet without affecting the valve performance.

### ICM 100 – 150:

Valve inlet pressure ( $P_1$ ) acting on the underside of the PTFE valve plate (h) also passes through the equalization hole (i) and ensures that the servo piston (j) is pressure balanced. This will equalize  $P_1$  and  $P_2$ . During an opening operation of the valve, the pilot piston (k) will be raised from its valve seat inside the servo piston (j). This allows the  $P_2$  pressure to escape through the servo piston (j) to the outlet of the valve. The pressure  $P_1$  will act on the underside of the servo piston (j) and force it to open. This will close the gap between the pilot piston (k) and the servo piston (j) until the pressures  $P_1$  and  $P_2$  are equalized again. When there is no pressure difference between  $P_1$  and the outlet of the valve the pilot piston (k) is attached to the servo piston (j) ensuring it to open up.

### ICAD

There are two sizes of ICAD actuator that covers the range of valves from ICM 20 to ICM 150. The actuators have a fully weather protected enclosure with none of the moving parts exposed to the environment.

The fast acting actuators and balanced valve design results in the valve being able to move from the fully closed to the fully open position in between 3 to 45 seconds depending on valve size and ICAD setup.

# ICAD

Actuator types ICAD 600A and 1200A are dedicated for use with ICM motor operated valves. There are only two sizes of ICAD actuators that cover the range of valves from ICM 20 to ICM 150.  
The ICAD is controlled via a modulating analogue signal (e.g. 4 – 20 mA / 2 – 10 V) or a

digital ON / OFF signal. ICAD incorporates an advanced MMI (Man Machine Interface), including continuous display of Opening Degree, which gives the user a very advanced and flexible setup procedure that can meet many different applications.

## Features (actuator)

- Designed for industrial refrigeration installations.
- Advanced and high speed Digital Stepper Motor Technology
- Seven segment LCD display and three programming keys included
- Valve opening degree can be observed continuously.
- Can easily be configured to different applications on-site (change speed, ON / OFF, etc.)
- Modulating, ON / OFF operation
- Multiple speed selection during operation
- Logging of old alarms
- Password protection
- Control input signal :  
4 – 20 mA, 0 – 20 mA, 0 – 10 V, 2 – 10 V, one or two digital inputs.
- Position feed back : 0 – 20 mA, 4 – 20 mA (ICM)
- 3 Digital outputs for feedback
- Resolution: 20 micron/step (0.02 mm stroke pr. step)
- Auto Calibration, Neutral zone
- In the event of a power failure, multiple fail safe options are possible. During power failure, ICM can be selected to:  
Close ICM,  
Open ICM,  
Stay in the same position, as when power failure occurs  
Go to a specific ICM valve opening degree
- Hermetic magnetic motor
- Enclosure: IP67 ~ NEMA 6
- ICAD 600A / 1200A ensures an accurate feedback on the valve position.

## Technical data (actuator)

ICAD 600A and ICAD 1200A can be used together with following Danfoss valves.

ICAD 600A	ICAD 1200A
ICM 20	ICM 40
ICM 25	ICM 50
ICM 32	ICM 65
	ICM 100
	ICM 125
	ICM 150

### Materials

Housing  
Aluminium

Top part of ICAD  
PBT thermo plastic

### Weight

ICAD 600A: 1.2 kg / 2.64 lb  
ICAD 1200A: 1.9 kg / 4.19 lb

### Temperature range (ambient)

-30 – 50 °C / -22 – 122 °F

### Enclosure

IP 67 (~NEMA 6)

### Electrical connection

Connection to ICAD is done via M12 connectors. ICAD has two M12 male connectors build-in:  
Power supply: 4 poled M12 male connector  
Control signals: 8 poled M12 male connector

ICAD can be delivered with (1.5 m. / 60 in.) or without cables with M12 female connectors:  
Power Supply cable with 4 poled M12 female connector: 3 x 0.34 mm<sup>2</sup> (3 x ~22 AWG)  
Control cable with 8 poled M12 female connector: 7 x 0.25 mm<sup>2</sup> (7 x ~24 AWG)

Cable set with M12 female connectors in other lengths are available. See the section "Spare parts and accessories".

# Technical data (cont.)

## Electrical data

### Please observe cable voltage drop

Distance between the applied DC transformer and the ICAD terminal box may cause a voltage drop. Cross section of cables and size of DC transformer must be calculated so that the voltage at all time **at the ICAD terminal box\***, both during standstill and during operation of ICAD, is within this range:

Prefabricated ICAD cable length Code number	1.5 m 027H0426	3 m 027H0438	10 m 027H0427	15 m 027H0435
Voltage ICAD terminal (600A / 1200A) [V DC]	Min. 21 Max. 26.4	22	23	24

\* Do not measure inside the ICAD itself.

Supply voltage is galvanic isolated from Input/Output.

**Supply voltage:** See above table  
**Load:** ICAD 600A: 1.2 A  
ICAD 1200A: 2.0 A

**Fail safe supply:** See above table  
**Load:** ICAD 600A: 1.2 A  
ICAD 1200A: 2.0 A

**Analogue Input** - Current or Voltage  
**Current:** 0/4 – 20 mA  
**Load:** 200  $\Omega$   
**Voltage:** 0/2 – 10 V DC  
**Load :** 10 k $\Omega$

**Analogue Output:** 0/4 – 20 mA

**Load :**  $\leq 250 \Omega$

**Digital Input** - Digital ON / OFF input by means of volt-free contact (Signal / Telecom relays with gold-plated contacts recommended) – Voltage input used  
**ON:** Contact impedance < 50  $\Omega$  )  
**OFF:** Contact impedance > 100 k  $\Omega$

**Digital Output** - 3 pcs. NPN transistor output  
**External supply:** 5 – 24 V DC  
(Same supply as for ICAD can be used, but please note that the galvanically isolated system will then be spoiled)

**Output load:** 50  $\Omega$   
**Load:** Max. 50 mA

**Battery capacity:** For each open/closed cycle

	Speed Parameter i04	ICM 20	ICM 25	ICM 32
ICAD 600A	Max. (i04 = 100)	2 mAh	5 mAh	5 mAh
	Min. (i04 = 1)	200 mAh	467 mAh	533 mAh
	Speed Parameter i04	ICM 40	ICM 50	ICM 65
ICAD 1200A	Max. (i04 = 100)	17 mAh	22 mAh	22 mAh
	Min. (i04 = 1)	1667 mAh	2167 mAh	2167 mAh
	Speed Parameter i04	ICM 100	ICM 125	ICM 150
ICAD 1200A	Max. (i04 = 100)	54 mAh	65 mAh	76 mAh
	Min. (i04 = 1)	5318 mAh	6351 mAh	7501 mAh

## Technical data (cont.)

### Electrical data (continued)

#### Cable connections

#### Communication connector / cable

Ref.	Color		Description	
A	Black	-	Common Alarm	} Digital Output
B	Brown	-	ICM fully open	
C	Red	-	ICM fully closed	
D	Orange	-	GND ground	
E	Yellow	+	0/4 - 20 mA Input*	
F	Green	+	0/2 - 10 V Input. Also used with GND (orange wire) as a digital input #1 for on-off operation or floating 3-point control	
G	Blue	+	0/4 - 20 mA Output*	

#### Power connector/cable (3 wires)

I	Black	+	Fail safe supply Battery / UPS (uninterruptable power supply) 19 V DC
II	White	+	Supply voltage
III	Brown	-	24 V DC

\* If using floating 3-point control (parameter i02=3) then wire colors yellow and blue are combined to make the 2nd digital input

## Approvals

CE according to 89/336 EEC (EMC)  
Emission : EN61000-6-3  
Immunity:EN61000-6-2

## Function (actuator)

The design of ICAD is based on a digital stepper motor technology combined with an advanced MMI (Man Machine Interface), that gives excellent possibilities for having a high degree of flexibility with the same type of ICAD actuator.

The ICAD display will continuously display the ICM valve opening degree in % unless there is an alarm or the parameter list is being viewed. The display will also indicate **Mod** if being controlled by an analog input signal (modulating mode) or if being controlled by digital inputs the display will indicate **Low**, **Med** or **High** depending on the speed setting.

The advanced menu system will allow several parameters to be adjusted to obtain the required function. Among these are:

- Analog input for modulating control  
0 – 20 mA or 4 – 20 mA  
0 – 10 V or 2 – 10 V

- Digital Inputs  
ICAD can be configured to support one or two digital inputs.

When using one digital input for ON / OFF control, 0 – 10 V can not be used at the same time.

When using two digital inputs for floating 3 point control, the analog input (0/2 – 10 V, 0/4 – 20 mA) and Analog Output (0/4 – 20 mA) can not be used at the same time.

- Analog output  
0 – 20 mA or 4 – 20 mA
- Automatic or manual control
- Change of ICM valve speed
- Automatic calibration
- Multiple Fail Safe set-up options during power cut

A password protection has been linked to the parameter of entering the correct ICM valve to avoid unintentional and non-authorised operation.

ICAD can manage and display different alarms. If an alarm has been detected the display will alternate between showing: Actual alarm present and Opening Degree of ICM valve. If more than one alarm is active at the same time the alarm with the highest priority will take preference. The alarm with the highest priority is shown on the display.

All alarms will automatically reset when disappearing.

Previous alarms can be recalled for traceability and service purposes.

Any active alarm will activate the common digital alarm output.

ICAD provides two digital output signals to 3rd party control equipment (e.g. PLC) indicating if the ICM valve is completely open or completely closed.

## Operating the ICAD menu

1. To access the ICAD actuator menu, press and hold the middle button (2) until the menu appears.

1. Down arrow push button
2. Enter
3. Up arrow push button
4. Display

2. Once you are in the menu, use the UP (3) and DOWN (1) arrows to move through the list of parameters.
3. To display and/or change the value of the parameter, press the middle button (2) to view the current settings.
4. a) To change the value of a parameter, use the up or down arrow to establish the new value for that parameter.
5. b) Once the new value for the parameter has been selected, press the middle button to save the change and return to the menu.
6. Repeat this procedure for all parameters.
7. Exit from the parameter list by pressing and holding the middle button for 2 seconds or simply wait for the ICAD to return to the main display (approx. 20 seconds).

## Alarms

ICAD can handle and display different alarms.

Description	ICAD alarm text	Definition of event	Comments
No Valve type selected	<b>A1</b>	Alarm ON	At start-up <b>A1</b> will be displayed until parameter <b>i26</b> is set
Controller fault	<b>A2</b>	Alarm ON	Internal fault inside electronics. Carry out: 1) Power OFF and Power ON If A2 still active. 2) Make a Reset to factory setting If A2 still active. Return ICAD to Danfoss
Analog input error	<b>A3</b>	Alarm ON	Not active if <b>i01</b> = 2, or <b>i02</b> = 2 When <b>i03</b> = 1 and AI A > 22 mA When <b>i03</b> = 2 and AI A > 22 mA or AI A < 2 mA When <b>i03</b> = 3 and AI A > 12 V When <b>i03</b> = 4 and AI A > 12 V or AI A < 1 V
Low voltage of fail safe Supply	<b>A4</b>	Alarm ON	If 5 V < fail safe supply <18 V. Enabled by <b>i08</b>
Check supply to ICAD	<b>A5</b>	Alarm ON	If supply voltage < 18 V
Calibration extended failed	<b>A6</b>	Alarm ON	Check valve type selected. Check presence of foreign debris inside ICM valve
Thermal overload	<b>A8</b>	Alarm ON	ICAD stepper motor temperature too high
Valve locked	<b>A9</b>	Alarm ON	Only active if <b>i16</b> = 1 If the ICM valve is locked for more than 15 seconds (unable to reach its requested position) A9 will flash in display. A9 alarm can only be reset by Power OFF / ON of ICAD

If an alarm has been detected the ICAD display (fig. 2) will alternate between showing actual alarm and present Opening Degree.

If more than one alarm is active at the same time the alarm with the highest priority will take preference. **A1** has the highest priority, **A9** the lowest.

Any active alarm will activate the Common Digital Alarm output (Normally Open).

All alarms will automatically reset them-selves when they physically disappear.

Old alarms (alarms that have been active, but have physically disappeared again) can be found in parameter **i11**.

### Parameter list - Valid for software versions i58=9 and parameter i59=18 and onwards

Description	ICAD parameter	Min	Max	Factory Setting	Setting stored	Pass word	Comments
OD (Opening degree)	-	0	100			-	ICM valve Opening Degree in % is displayed during normal operation. Running display value (see <b>i01</b> , <b>i05</b> ).
Main switch for manual operation	<b>i01</b>	1	2	1	Yes	No	Internal main switch 1: Normal operation 2: Manual operation. Valve Opening Degree will be flashing. With the down arrow and the up arrow push buttons the OD can be entered manually.
Operation mode	<b>i02</b>	1	2	1	Yes	No	Operation mode 1: Modulating – ICM positioning according to Analog Input (see <b>i03</b> ) 2: ON / OFF - operating the ICM valve like an ON / OFF solenoid valve controlled via Digital Input. See also <b>i09</b> . 3: Neutralzone / 3 point control. Increase / Decrease Opening Degree by Digital Input. See ICAD instructions for wiring diagram
Analog input signal	<b>i03</b>	1	4	2	Yes	No	Type of AI signal from external controller 1: 0 – 20 mA 2: 4 – 20 mA 3: 0 – 10 V 4: 2 – 10 V
Speed  In <b>Modulating Mode</b> Opening/closing speed  In <b>ON / OFF Mode</b> Opening speed	<b>i04</b>	1	100	50/ 100	Yes	No	Speed can be set in % of full speed. Max. speed is 100 % - Not active in manual operation ( <b>i01</b> = 2) If <b>i26</b> = 1 – 3 then factory setting =100 If <b>i26</b> = 4 – 9 then factory setting =50 If ICM is opening and ( <b>i04</b> <= 33) or ICM is closing and ( <b>i14</b> <= 33) => Low is displayed. If ICM is opening and (33 < <b>i04</b> <= 66) or ICM is closing and (33 < <b>i14</b> <= 66) => Med is displayed. If ICM is opening and ( <b>i04</b> >= 67) or ICM is closing and ( <b>i14</b> >= 67) => High is displayed
Automatic calibration	<b>i05</b>	0	2	0	No	No	Not active before <b>i26</b> has been operated. Always resets to 0 after calibration. CA will flash in the display during calibration, if Enter push button has been activated for two seconds 0: No Calibration 1: Normal forced calibration - CA flashing slowly 2: Extended calibration – CA flashing rapidly

to be continued ...

# Data sheet | Motor operated valves, type ICM and actuators type ICAD

Description	ICAD parameter	Min	Max	Factory Setting	Setting stored	Pass word	Comments

Motor mP SW ver.	i59	0	100	-	Software version for motor microprocessor

## Reset to factory setting :

1. Remove the power supply.
2. Activate down arrow and up arrow push buttons at the same time.
3. Connect the power supply.
4. Release down arrow and up arrow push buttons.
5. When the display on ICAD is alternating between showing: **CA** and **A1** the factory resetting is complete.

## ICAD protection cap

For all outdoor applications or where extra protection of the display and keyboard is needed, Danfoss recommends using the ICAD protection cap.

The protection cap will give the ICAD display and keyboard an extra protection against e.g. sun radiation or other impacts from the surrounding environment. Furthermore it protects the cable connectors against inappropriate loads.

The special designed protection cap can be mounted on all ICAD 600A / 1200A.

The installation of the protection cap is done by sliding the protection cap down on the top of the ICAD. To secure the protection cap, tie it to the connector cables using the hole in the protection cap.

## ICAD-UPS for ICM 20 – 150

ICAD-UPS is dedicated for use along with ICM sizes 20 - 150 installed with ICAD 600A and ICAD 1200A actuators.

In the event of power failure, there is a need to make sure that the ICM goes to a safe position.

ICAD-UPS can be connected to the ICAD 600A / 1200A.

The solution ICM with ICAD connected to ICAD-UPS will give one of the following possibilities in the event of power failure:

- close ICM
- open ICM
- stay
- go to a specific ICM Opening Degree

When power supply has been re-established the system will automatically return to normal operation.

### Facts and features

- Industrial product.
- Can support up to
  - 3 pcs. of ICAD 1200A or
  - 8 pcs. of ICAD 600A
- Integrated solution - battery and UPS.
- Industrial approvals: CE, UL, GL (Germanischer Lloyd).
- DIN rail mounting.
- LED indication
  - Green (Power ON)
  - Yellow (Flashing:charging, Constant: Buffer mode (Failsafe supply to ICAD))
  - Red (Battery fully discharged / Battery faulty)
- 24 V DC supply → Same transformer as for ICAD can be used. Only +0,5 A extra load on the transformer.
- Check of battery every 60 sec.
- Adjustable buffer time\*. (1, 2, 3, 5, 10, 15, 20, 30 or infinity) = Ensures longer life time of the battery.
- Forced remote shutdown in buffer mode via digital input.
- 3 digital volt free relay change over contacts for signals to PLC systems. (Power OK, Buffer mode (failsafe supply to ICAD), Alarm).

\* Buffer time is defined as the period where ICAD is only powered from the ICAD-UPS (i.e. not from main supply). On ICAD-UPS there is an adjustable buffer time setting (1, 2, 3, 5, 10, 15, 20, 30 min. or infinity). If set to 3, ICAD-UPS will switch off power to connected ICAD 600A / 1200A, 3 minutes after the power failure occurs. This ensures that the internal battery inside ICAD-UPS do not fully discharge.

Code number: **027H0182**

For further information please see the instruction PIHV0B.

## ICM Application

Valve capacities for different refrigerants and applications are given in the following tables. Selection of ICM / ICS valves will be available with the DIRcalc selection program. The resultant valve selections will be: ICM-EXP for expansion valve functions and where the selection criteria has been predefined for expansion valve application: ICM will be for control valve functions and will include for all available function modules as valve pressure drop is the main consideration for valve selection.

The process for identifying the ICM valve solution can be determined from the ordering pages. Initially select the nominal valve size, identify the required valve body and connection types, followed by the module insert and then the correct actuator to suit the module insert and valve body.

As the ICM and ICS valves use a common body it is possible to install the body without having previously determined whether a servo or motor function is required. A blank top cover complete with fixing screws can be supplied to allow for pressure testing.

In applications where the ICM is used to control pressure / temperature at differing operating conditions e.g. dual temperature store, the ICM must be selected so that the full operating conditions (minimum and maximum capacity / summer and winter conditions) are within the control range of the selected ICM valve.

It is particularly important to ensure that the ICM valve selection is not oversized and as a consequence operates at a minimum opening degree, which can result in a hunting condition and continuous recalibration of the ICM valve.

### Note:

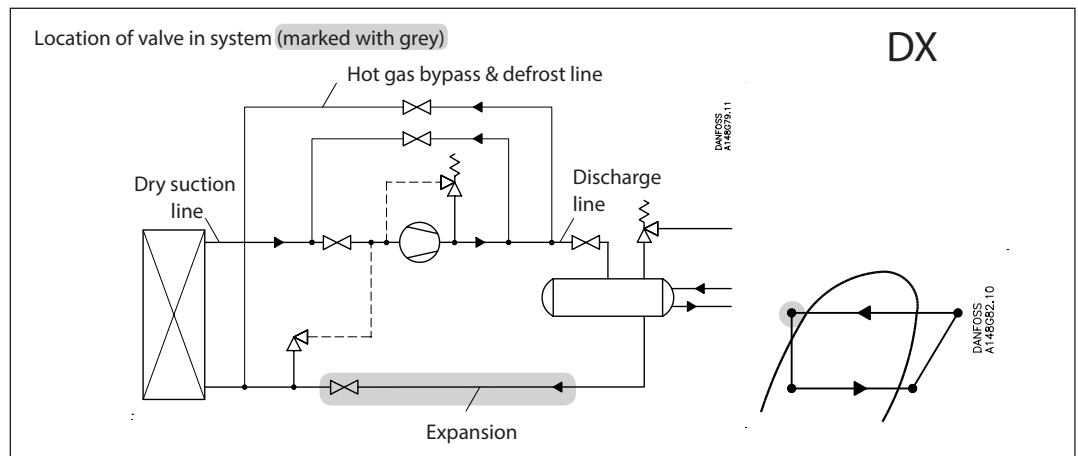

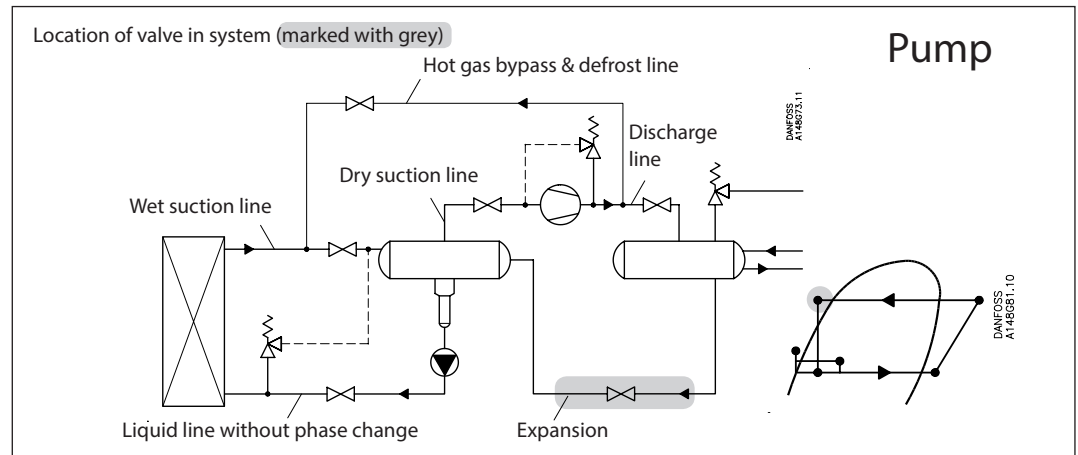

ICM valves should be sized to suit required capacity and operating conditions. ICM valves should not be line sized.

For ICM 20 – 65 applications it is recommended that the valve opening degree at the minimum operating conditions is greater than 5%.

For ICM 100 – 150 applications it is recommended that the valve opening degree at the minimum operating conditions is greater than 10%.

## Nominal capacities

## Expansion - ICM

### Correction factors

When dimensioning, multiply the evaporator capacity by a correction factor  $k$  dependent on the subcooling  $\Delta t_{sub}$  just ahead of the valve.

The corrected capacity\* can then be found in the capacity table.

### Correction factors for subcooling

Subcooling °F	3.6	7.2	18	27	35	45	54	63	72
R717	1.01	1	0.98	0.96	0.94	0.92	0.91	0.89	0.87
R744	1.02	1	0.95	0.90	0.86	0.82	0.79	0.75	0.73
R134a	1.03	1	0.93	0.88	0.84	0.80	0.76	0.73	0.70
R404A	1.04	1	0.91	0.83	0.78	0.73	0.68	0.65	0.61
R22	1.03	1	0.94	0.90	0.87	0.83	0.80	0.77	0.74

\* The capacity table is based on nominal conditions of subcooling just ahead of the valve of 4°K.

### Calculation example:

An application has the following operating conditions:

Refrigerant R717

$T_e = 20^\circ\text{F}$

$T_c = 85^\circ\text{F}$

$Q_0 = 426 \text{ TR}$

$\Delta t_{sub} = 36^\circ\text{F}$

Correction factor for subcooling: 0.94

Pressure drop across the valve:  
167 psig - 48 psig = 119 psi

Corrected capacity:  $426 \times 0.94 = 400 \text{ TR}$

From the R717 capacity table ICM 20-C is selected with  $Q_{nom}$  capacity 574 TR at 120 psi.

Note: It is common to select a valve with a least 15% additional capacity for superheat control and at least 25% additional capacity for liquid level control applications.

## Nominal capacities

### Selection tables for solenoid function and pressure regulator function in the liquid line with / without phase change

#### Calculation example (R717 capacities):

An application has following running conditions:

$T_e = -20\text{ }^{\circ}\text{F}$   
 $Q_o = 130\text{ TR}$   
 $T_{liq} = 50\text{ }^{\circ}\text{F}$   
 Max.  $\Delta p = 3.5\text{ psi}$   
 Connection:  $\frac{3}{4}''$

The capacity table is based on nominal condition  
 (pressure drop  $\Delta p = 3\text{ psi}$ ,  $T_{liq} = 90\text{ }^{\circ}\text{F}$ )

Therefore the actual capacity must be corrected to nominal condition by means of correction factors.

Correction factor for  $\Delta p\text{ } 3.5\text{ psi}$   $f_{\Delta p} = 0.91$   
 Correction factor for liquid temperature  
 $f_{T_{liq}} = 0.92$

$$Q_n = Q_o \times f_{\Delta p} \times f_{T_{liq}} = 130 \times 0.91 \times 0.92 = 109\text{ TR}$$

From the capacity table a ICM 20-C with  $Q_n$  capacity 134 TR is selected.

## Nominal capacities

Capacity table for nominal conditions,  $Q_N$  [Tons of Refrigeration],  
 $T_{liq} = 90^\circ\text{F}$ ,  
 $\Delta P = 3$  psi

## Selection tables for solenoid function and pressure regulator function in the liquid line with / without phase change

## Nominal capacities

### Selection tables for solenoid function and pressure regulator function in the pumped liquid line without phase change

#### Calculation example (R717 capacities):

An application has following running conditions:

$T_e = -20\text{ }^{\circ}\text{F}$   
 $Q_o = 130\text{ TR}$   
 Circulation rate = 3  
 Max.  $\Delta p = 3.5\text{ psi}$   
 Connection:  $1\frac{1}{4}"$

The capacity table is based on nominal condition  
 (pressure drop  $\Delta p = 3\text{ psi}$ , circulation rate = 4)

Therefore the actual capacity must be corrected to nominal condition by means of correction factors.

Correction factor for  $\Delta p\text{ } 3.5\text{ psi}$   $f_{\Delta p} = 0.91$   
 Correction factor for circulation rate  $f_{rec} = 0.75$

$$Q_n = Q_o \times f_{\Delta p} \times f_{rec} = 130 \times 0.91 \times 0.75 = 89\text{ TR}$$

From the capacity table a ICM 32-B with  $Q_n$  capacity 171 TR is selected.

## Nominal capacities

Capacity table at nominal conditions,  $Q_N$  [Tons of Refrigeration],  
Circulation rate = 4,  
 $\Delta p = 3$  psi

## Nominal capacities

## Selection tables for solenoid or pressure regulator function in wet suction line

### Calculation example (R717 capacities):

An application has following running conditions:

$T_e = -20\text{ F}$   
 $Q_o = 8\text{ TR}$   
 Circulation rate = 3  
 Max.  $\Delta p = 3.5\text{ psi}$   
 Connection: 1"

The capacity table is based on nominal condition  
 (pressure drop  $\Delta p = 3\text{ psi}$ , recirculation rate = 4)

Therefore the actual capacity must be corrected to nominal condition by means of correction factors.

Correction factor for  $\Delta p\ 3.5\text{ psi}$   $f_{\Delta p} = 0.91$

Correction factor for circulation rate  $f_{rec} = 0.9$

$$Q_n = Q_o \times f_{\Delta p} \times f_{rec} = 8 \times 0.91 \times 0.9 = 6.6\text{ TR}$$

From the capacity table a ICM 25-B with  $Q_n$  capacity 10.2 TR is selected.

## Nominal capacities

Capacity table at nominal conditions,  $Q_N$  [Tons of Refrigeration],  
Circulation rate = 4,  
 $\Delta p = 3$  psi

## Nominal capacities

## Selection tables for solenoid or pressure regulator function in dry suction line

### Calculation example (R717 capacities):

An application has following running conditions:

$T_e = 0\text{ }^{\circ}\text{F}$   
 $Q_o = 20\text{ TR}$   
 $T_{liq} = 50\text{ }^{\circ}\text{F}$   
 Max.  $\Delta p = 3.5\text{ psi}$   
 Connection:  $1\frac{1}{4}"$

The capacity table is based on nominal condition  
 ( $\Delta p = 3\text{ psi}$ ,  $T_{liq} = 90\text{ }^{\circ}\text{F}$ )

Therefore the actual capacity must be corrected to nominal condition by means of correction factors.  
 Correction factor for  $\Delta p\text{ } 3.5\text{ psi}$   $f_{\Delta p} = 0.91$   
 Correction factor for liquid temperature  $f_{T_{liq}} = 0.92$

$$Q_n = Q_o \times f_{\Delta p} \times f_{T_{liq}} = 20 \times 0.91 \times 0.92 = 16.7\text{ TR}$$

From the capacity table a ICM 32-B with  $Q_n$  capacity 28.2 TR is selected.

## Nominal capacities

## Nominal capacities

## Selection tables for discharge line

### Calculation example (R717 capacities):

An application has following running conditions:

$T_e = 0^\circ\text{F}$   
 $Q_o = 8 \text{ TR}$   
 $T_{liq} = 50^\circ\text{F}$   
 $\text{Max. } \Delta p = 4.5 \text{ psi}$   
 $T_{disch.} = 120^\circ\text{F}$   
 $\text{Connection: } \frac{3}{4}''$

The capacity table is based on nominal condition  
 $(\Delta p = 3 \text{ psi}, T_{liq} = 90^\circ\text{F}, P_{disch.} = 185 \text{ psi}, T_{disch.} = 180^\circ\text{F})$

Therefore the actual capacity must be corrected to nominal condition by means of correction factors.  
 Correction factor for  $\Delta p$  4.5 psi  $f_{\Delta p} = 0.81$   
 Correction factor for liquid temperature  $f_{T_{liq}} = 0.92$   
 Correction factor for  $T_{disch.}$  120 °F,  $f_{T_{disch.}} = 0.95$

$$Q_n = Q_o \times f_{\Delta p} \times f_{T_{liq}} \times f_{T_{disch.}} = 8 \times 0.81 \times 0.92 \times 0.95 = 5.7 \text{ TR}$$

From the capacity table a ICM 20-B with  $Q_n$  capacity 8.4 TR is selected.

## Nominal capacities

Capacity table at nominal conditions,  $Q_N$  [Tons of Refrigeration],  
 $T_{liq} = 90^\circ\text{F}$ ,  
 $\Delta p = 2.9 \text{ psi}$ ,  
 $P_{disch.} = 185 \text{ psi}$ ,  
 $T_{disch.} = 180^\circ\text{F}$   
Superheating =  $12^\circ\text{F}$

with 3 m / 9.8 ft cables

## Multi-function tool for ICM 40 – 65

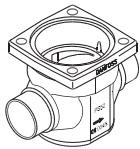

The multi-function tool can be used for:  
- Motor operated valve type ICM  
- Removing the ICS function module  
- Operating the ICS manual spindle  
For further information please see the instruction **PIHU0A**.

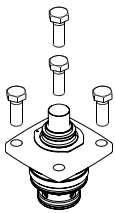

## Protection cap ICAD 600A / 1200A

\* Code number for ICM valve only.  
ICAD 1200A must be ordered separately.

ICAD 1200A with 3 m / 9.8 ft cables	ICAD 1200A without cable
<b>027X0168</b>	<b>027H9122</b>

### Spare parts

Please see DKRCI.PY.HS0.C

## Accessories

### ICV PM flanged valve housings

ICV PM flanged valve housings can replace the PM valves on already installed refrigeration systems.

### Pressure range

The ICV PM valve housing is designed for a max. working pressure of 28 bar g / 406 psig and therefore a suitable replacement for PM valves in the service market. They also offer the same drop-in dimensions as the PM valves.

Description	Code no.
ICV 25 PM Valve housing	<b>027H2119</b> *)
ICV 32 PM Valve housing	<b>027H3129</b> *)
ICV 40 PM Valve housing	<b>027H4128</b> *)
ICV 50 PM Valve housing	<b>027H5127</b> **)
ICV 65 PM Valve housing	<b>027H6128</b> **)

Function modules and top covers must be ordered separately (see the section "Ordering").

### ICV (H)A4A flanged valve housings

ICV (H)A4A flanged valve housings can replace the (H)A4A valves on already installed refrigeration systems.

The ICV (H)A4A flanged valve housing provides an upgrade of the old motor valve types HMMR and HMMV to ICM motorized valve as a drop-in solution.

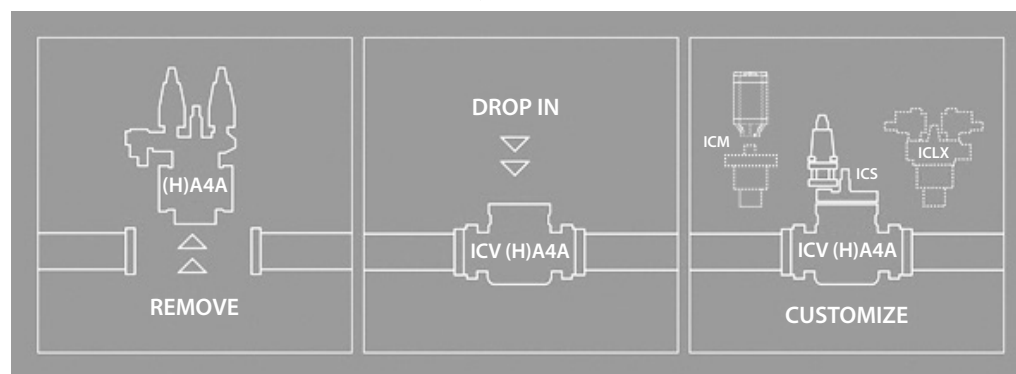

### Pressure range

The ICV (H)A4A valve housing is designed for a max. working pressure of 28 bar g / 406 psig and therefore a suitable replacement for (H)A4A valves in the service market. They also offer the same drop-in dimensions as the (H)A4A valves.

Description	Code no.
ICV 25 (H)A4A Valve housing	<b>027H2304</b> *)
ICV 32 A4A Valve housing	<b>027H3130</b> *)
ICV 32 HA4A Valve housing	<b>027H3131</b> *)
ICV 40 (H)A4A Valve housing	<b>027H4129</b> *)
ICV 50 (H)A4A Valve housing	<b>027H5128</b> **)
ICV 65 (H)A4A Valve housing	<b>027H6129</b> **)

Function modules and top covers must be ordered separately (see the section "Ordering").

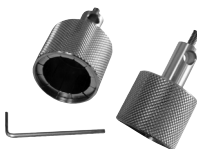

\*) Includes ICV PM valve housing, flange gaskets and flange bolts.

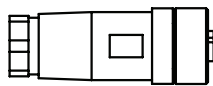

\*\*) Includes ICV PM valve housing, flange gaskets, flange bolts and flange nuts.

## ICM / ICAD Accessories

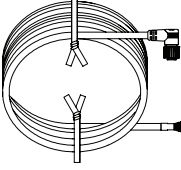

### Multi/function tool

	
Description	Code Number
For ICM sizes 20, 25, and 32	<b>027H0180</b>
For ICM sizes 40, 50, 65, 100, 125 and 150	<b>027H0181</b>

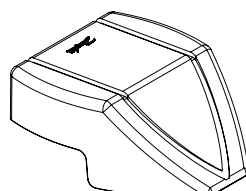

### Connectors for ICAD 600A / 1200A

	
Connector type	Code number
Two Female Connectors with screw terminals: - connector for power - connector for control signals	<b>027H0430</b>

### Cable for ICAD 600A / 1200A

	
Cable length	Code number
Cable set 1.5 m, female (4.9 ft.)	<b>027H0426</b>
Cable set 3 m, female (9.8 ft.)	<b>027H0438</b>
Cable set 10 m, female (32.8 ft.)	<b>027H0427</b>
Cable set 15 m, female (49 ft.)	<b>027H0435</b>

### Protection cap ICAD 600A / 1200A

	
Description	Code number
Protection cap	<b>027H0431</b>

### ICAD-UPS

	
Description	Code Number
