

Data sheet

Pilot valves

Types CVP, CVPP, CVC, CVE, EVM and CVH

Pilot valves for direct mounting in main valves

Pilot valves are intended for mechanical control of a main valve and are ready for direct installation in the top cover of the main valve.

Small capacities can be controlled by the pilot valve directly without a main valve when installed in the matching CVH housing.

The extensive range of Danfoss pilot valves include:

- Constant-pressure pilot valve, type CVP
- Differential-pressure pilot valve, type CVPP
- Pressure-operated pilot valve with reference pressure connection, type CVC
- Electronically operated constant-pressure pilot valve, type CVE
- Solenoid pilot valve, type EVM (NC)
- Solenoid pilot valve, type EVM (NO)
- Housing, type CVH for pilot valves, for mounting in external pilot lines

Features

- Applicable to HCFC, non flammable HFC, R717 (Ammonia) and R744 (CO₂). The use of Pilots with flammable hydrocarbons is not recommended
- Extremely accurate pressure and temperature control.
- The pilot valves can be screwed directly into the main valve, thus avoiding the necessity of welding, soldering and separate pilot lines.
- The pilot valves can be mounted directly in the ICS, PM or ICF valve or it can be connected via an external pilot line and a CVH housing.
- All pilot valves can be used on all sizes of main valves.
- Several pilot valves can be connected in series or in parallel to provide many functions in the same ICS or ICF valve.
- All pilot valves are delivered with gaskets.

Data sheet | Pilot valves for pilot operated main valves

Design

Each pilot valve is designed to give the optimum control accuracy within the specific function range of the valve.

Several pilot valves can be mounted in series and/or in parallel on the main valve (ICS, ICF or the discontinued PM) to suit numerous applications. Mounted in a CVH housing, the pilot valves can

be used in external lines, either as independently operating valves or as external control valves for the main valve.

The pilot valves can be used for all sizes of ICS and for ICF 50/65.

Technical data

Refrigerants

Applicable to HCFC, non flammable HFC, R717 (Ammonia) and R744 (CO₂). The use of pilot valves with flammable hydrocarbons is not recommended

Temperature range:

-60/+120°C (-76/+248°F)

Pressure range:

The pilot valves are designed for a max. working pressure of 52 bar g (754 psig)

Pressure setting ranges are given separately for the specific pilot valve.

For further information please see installation guides for ICS or ICF valves.

Constant-pressure pilot valve, type CVP

Design and function

CVP is a constant-pressure pilot valve for a max. working pressure (MWP) of 52 bar (754 psi) and with 3 setting ranges covering settings of -0.66 to 52 bar (19.5 in. Hg to 754 psi).

This pilot valve is used for maintaining a constant pressure on the inlet side of the main valve.

When a CVP is mounted in a CVH housing, it can be used as a separate constant-pressure valve or a pressure relief valve (e.g. to prevent hydraulic overpressure in an entrapped liquid).

Please note:
The CVP pilot can be used for most applications in the refrigeration system including hot gas relief systems.

The k_v/C_v value is measured with the pilot valve mounted in a CVH housing for external pilot lines. The value can vary slightly, depending on the setting value.

Data sheet | Pilot valves for pilot operated main valves

Differential-pressure pilot valve, type CVPP

Design and function

CVPP is a differential-pressure pilot valve for a max. working pressure (MWP) of 52 bar (754 psi) and with 2 setting ranges covering settings of -0.66 to 28 bar (19.5 in. Hg to 406 psi).

The pilot valve is used for maintaining a constant differential pressure between the CVPP valve reference pressure connection and the main valve inlet pressure.

CVPP incorporates a diaphragm so that the reference pressure and the refrigerant in the valve are physically separated. The pilot valve can therefore also be used as a pneumatic control valve either to control a main valve or as a separate pneumatic valve mounted in a CVH housing.

The k_v/C_v value is measured with the pilot valve mounted in a CVH housing for external pilot lines. The value can vary slightly, depending on the setting value.

Technical data

Pressure-operated pilot valve with reference pressure connection, type CVC

Design and function

CVC is a constant pressure pilot valve at an external reference point for a max. working pressure (MWP) of 52 bar (754 psi) and with 2 setting ranges covering settings of -0.66 to 28 bar (19.5 in. Hg to 406 psi).

The CVC-pilot is designed to maintain a constant pressure at an external reference point in the system.

CVC pilot valve installed in an ICS servo valve are used for e.g.:

- Outlet pressure regulator to regulate max. suction pressure, e.g. as a compressor crankcase pressure regulator;
- Outlet pressure regulator as a pressure limiter, e.g. for hot gas defrost of hot gas lines.

The reference pressure must be connected to the low-pressure side of the system.

The k_v/C_v value is measured with the pilot valve mounted in a CVH housing for external pilot lines. The value can vary slightly, depending on the setting value.

Electronically operated constant-pressure (constant pressure difference) pilot valve, type CVE

Design and function

CVE is, when fitted with the ICAD 1200A stepper-motor, a constant pressure pilot valve with electronic change of set-point for a max. working pressure (MWP) of 52 bar (754 psi) and with electronic controlled full range settings of -0.66 to 8 bar gauge (19.5 in. Hg to 116 psi). The CVE interface to the ICAD is hermetic closed and rotation force is transferred from the ICAD by magnetic forces.

The CVE pilot valve is designed to maintain a constant and very accurate inlet pressure of an ICS servo valve, e.g. evaporator pressure regulation.

The CVE/ICAD unit can be either stand-alone or connected to a remote EKE 347 or PLC with appropriate controller function.

The stand-alone arrangement allows the on-site ICAD setting - and the remote wiring allows remote setting of the desired set pressure.

The k_v/C_v value is measured with the pilot valve mounted in a CVH housing for external pilot lines. The value can vary slightly, depending on the setting value.

Technical data

Data sheet | Pilot valves for pilot operated main valves

Solenoid pilot valve, type EVM (NC)

Solenoid pilot valve, type EVM (NO)

Design and function

EVM is a solenoid pilot valve for use when on/off operation of the main valve is required. EVM valves are intended for use with Danfoss solenoid valve coils ("Coils for solenoid valves", data sheet DKRCC. PD.BS0.F).

Together with CVH, an EVM can also be used as an independent solenoid valve.

The k_v/C_v value is measured with the pilot valve mounted in a CVH housing for external pilot lines.

MOPD: Maximum opening differential pressure with a 10 W a.c. coil.

With:
20 W a.c. coil: 40 bar (580 psi)
20 W d.c. coil: 14 bar (203 psi)

MCPD: Maximum closing differential pressure with a 10/12 W a.c. coil or a 20 W d.c. coil.
